Problem – Solution Fit Template

Date	30 June 2026
Roll Number	23A51A0535
Project Name	Library Book Request
Maximum Marks	4 Marks

The **ServiceNow Library Book Request System** bridges the gap between students needing academic resources and library administrators managing inventory manually. Traditionally, students faced fragmented tracking, slow manual processing times, and out-of-stock surprises, while librarians wrestled with inefficient manual logging prone to human error (such as past-dated entries).

By leveraging the ServiceNow platform, this project introduces a centralized, digital ecosystem. It automates unique request numbers, actively restricts users from entering invalid past dates, and triggers instant email notifications to the librarian upon submission. This solution eliminates operational friction, minimizes manual tracking delays, and creates a reliable, transparent touchpoint that ensures students get their required reading material efficiently.

Template

Purpose:

- 📌 **Solve Complex Tracking Problems for Students:** Simplifies the book borrowing process into a clean, digital-first experience that fits right into a busy student's schedule, eliminating physical paperwork and long waiting lines.
- 📌 **Succeed Faster by Tapping Existing Channels:** Increases system adoption by allowing students to submit requests online via their personal devices, removing the need to visit the library desk just to place a request.
- 📌 **Build Trust Through Data Integrity:** Eliminates frequent annoyances and data errors by automatically restricting invalid past dates and assigning a unique tracking number to every single request.
- 📌 **Optimize Librarian Response Time:** Speeds up book fulfillment by automatically sending real-time email notifications to the librarian the exact moment a student hits submit.
