

Ideation Phase

Brainstorm & Idea Prioritization Template

Date	June 30, 2026
Roll Number	23A51A0535
Project Name	Library Book Request
Maximum Marks	4 Marks

Brainstorm & Idea Prioritization Template:

Brainstorming an automated library workflow provides a free and open environment that encourages developers, students, and administrative staff to participate in the process engineering that leads to campus problem-solving. Prioritizing efficiency over rigid legacy systems, out-of-the-box platform configurations are welcome and built upon, allowing all participants to collaborate and help each other develop a rich amount of creative technical solutions.

Step-1: Team Gathering, Collaboration and Select the Problem Statement

ServiceNow Project: Library Book Request

This guide outlines the implementation of a student book request workflow, including custom data models and automation.

- Automated Workflow
- Custom Data Table
- Student & Librarian

1. Create a custom table & Prepare

Define the core data structure for book requests and configure permissions.

3 hours

A Define [Request] Table:
Columns for Book Title, Author, Issue Date, Student ID, Request #, State.

B Configure ACLs:
Ensure students can only see their own requests; librarians see all.

C Auto-generate Request Number:
Use Number Maintenance with prefix (e.g., LBR) and padding.

[Open Table config →](#)

2. Implement Validation & Notification

Configure Business Rules and Events to ensure data integrity and workflow.

4 hours

VALIDATION

Business Rule (Before Insert/Update):

Check: Issue Date < Current Date?

If yes, "gs.addErrorMessage", clear date, and set "current.setAbortAction(true);"

Notification Workflow

Event Registration: Create event "lib_book_request.submitted"

After Insert BR: Fire event "lib_book_request.submitted"

Email Notification: Configure to fire on event, sent to Librarian Group.

Workflow: Start the approval/fulfillment process.

Valid Dates

Unique Identifiers

Proactive Notifications

Group Notifications

Step-2: Brainstorm, Idea Listing and Grouping

3

Design & Feature Definition

Specify application requirements and translate them to ServiceNow components.

30 minutes

TIP
Focus on data model first, & well-recognized table structure simplifies everything.

Module 1: Custom Table & Schema

Module 2: Field Validation Rules

Module 3: Number Maintenance & Forms

Module 4: Workflow & Notification

Group Ideas

Feature Group A: Data Structure (Module 1, 3)

Feature Group B: Business Logic (Module 2, 4)

4

Sprint Planning & Task Assignment

Distribute tasks to team members for parallel development and define the MVP.

20 minutes

TIP
Assign a 'Sprint Master' and set clear deliverables for each task.

Task Allocation

MVP Definition

MVP: Library Book Request Core Workflow

Features

- Request submission form
- Auto-generated request number
- Librarian group notification
- Basic request state management

Step-3: Idea Prioritization

5

Feature Prioritization, MVP Definition & Future Roadmap

Review all Module features and ideas to define the Minimum Viable Product (MVP) and set up our development phases. Use this grid to determine feature importance and feasible timelines.

25 minutes

Group Ideas: clustering examples for Phase 1:

- Feature Group MVP (Must-Haves):** Core Library Request and Notification.
- Feature Group P2 (Should-Haves):** Extended Validations and Basic State Management.
- Feature Group P3 (Future Roadmap):** Search, Reports, and Admin Tools.
