

**Project Design Phase
Proposed Solution Template**

Date	30 June 2026
Roll Number	23A51A0535
Project Name	Library Book Request
Maximum Marks	2 Marks

Proposed Solution Template:

Project team shall fill the following information in the proposed solution template.

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	College students face slow, fragmented, and manual processing when requesting library books. A manual, paper-based approach lacks tracking, leads to communication gaps, and is highly prone to human errors
2.	Idea / Solution description	A digital ServiceNow application built around a custom table to manage the lifecycle of requests. It utilizes automation: request numbers are auto-generated natively, and an onChange client script prevents students from selecting invalid past dates. Upon submission, a notification instantly alerts the librarian.
3.	Novelty / Uniqueness	Instead of a basic form, it leverages an enterprise cloud platform (ServiceNow) to enforce strict data integrity <i>before</i> submission (blocking past dates) and uses platform automation for seamless routing and unique record identification, removing manual steps.
4.	Social Impact / Customer Satisfaction	For students, it provides a fast, modern digital service, eliminating waiting lines and increasing process transparency. For librarians, it eliminates logbook maintenance and reduces data entry errors, freeing up time for direct student support.
5.	Business Model (Revenue Model)	Operational Efficiency Model: As an internal utility, value is realized through substantial time and material savings by replacing manual tracking and eliminating logbooks and paperwork, leading to optimized library staff utilization.

6.	Scalability of the Solution	Highly scalable custom architecture that can easily be expanded to manage multi-campus inventory, support real-time digital book catalogs, add student finepayment integrations, or adapt into an IT asset-tracking app for lab equipment.
